### NIFTY CHART

Proximity towards the termination zone with the index trading closer towards the upper end of the Wedge formation along with the negative divergence on the daily scale is a compelling reason to book longs around 11505 & remain put on the final day of the week. On the flip side the wedge formation would have its bearish implications once the index closes below 11360 which could be a point of inference for adding some short sells. Until then we advise to book profits in the index & await for a counter trend to emerge of engage further.
